

DOI Work Activity 1H: Administer Forest Resources

Program Area:	Resource Information
End Outcome Goal:	UEO 3 – LAND-RELATED RESOURCES – Manage or Influence Resource Use to Enhance Public Benefit, Responsible Development, and Economic Value
Intermediate Outcome:	This activity does not align to an intermediate outcome
DOI Sub process:	1a - Collect data

Examples/Notes: Forested land is defined as land having 10% or greater tree canopy cover with an intent to manage for tree canopy cover in the future. Forested areas intended to be converted to rangelands are not to be considered forested land, regardless of the amount of existing canopy cover.

Work Activity Description: This work activity includes:

- 1) Acres of forest and woodland inventoried by methods that quantify the spatial distribution, composition, and rates of change for forest parameters -- within specified levels of precision -- for the purpose of developing management prescriptions.
- 2) Acres of forest and woodland commercial timber sale treatment for the primary purpose of providing opportunities for environmentally responsible commercial activity and/or increasing wood fiber production.
- 3) Planning, field preparation, sale and administration of short form timber sale contracts under \$2,500 in value. Includes all vegetative resources sold using the Contract for the Sale of Vegetative Resources (form 5450-1); all vegetative resources, including saw timber sold using the Vegetative or Mineral Material Negotiated Cash Sale Contract (form 5450-5); all Christmas trees sold using the Christmas Tree Tag (form 5450-10); and all fuel wood and Christmas trees sold using joint agency permits.

Appropriate charges include actual inventory or identified surveys, and all costs associated with planning, preparing and administering any inventory or identified survey contracts. Includes extensive and intensive forest inventories, walk-thru forest surveys, field reconnaissance for insect and disease occurrences and field plots for determining forest conditions and treatments. Do not include forest inventory and assessment or insect and disease surveys conducted by the forest services, or inventory for the primary purposes of wildlife, riparian, fisheries, recreation, range, and /or fuels management parameters.

Output: Acres administered (inventoried/, monitored, harvested, sold)	Unit of Measure: Number of acres administered. Only report acres where inventory protocols, results, and/or analysis have been documented. Inventories should be statistically sound with meaningful measures and specified objectives. Acres accomplished should be considered as the entire population of the acres to which the sampling system is applied. Acres should be determined using professionally accepted ground survey or aerial photography interpretation techniques.
